

Stainless Steel Digital Junction box JTB-S-D

Specification:

JTB-S-D lighting protect for junction box is designed for Lighting Surge Environment, it is such a kind of lighting protection junction box It adopts advanced lighting protection design case, and win Validation from Shanghai Institute of Measurement and Test Technology institute(Testing report number:2009J10-30-111041).

Under the system is in good earthing condition, it could reduce the destruction probability when digital load cell and digital junction box suffering lighting. make sure the weighing equipment safe

Lighting protection junction box has four models, 4wires,6wires.8wires and10wires

The circuit design, main components all adopt famous factories' products, low residual voltage, sensitive reaction. Big free float;

High internal protection, it has passed <GB/T 3482-2008Electric equipment lighting Testing Method >Without power 20KV,with power 6KV lighting surge testing class (4 class)

Characteristics and Descriptions

Adopts stainless steel enclosure. high compatibility. Convenient mounting way. According most customers' user habit Multi-stage protection
